Complete Listing of All Claims:

Claim 1 (cancelled). An improved clothing hanger adapted for personal use comprising a triangular rigid upper part adapted to receive a shirt, coat, blouse or the like, the upper part having attached thereto a closet rod hanging means or hook, the hook having attached thereto a text messaging means for communicating instructions to a person, a transparent or translucent container means detachably connected to the upper part, the container means being adapted to hold articles of clothing such as underwear, belts, scarves, socks and the like, at least one horizontal bar attached to the upper part and located underneath the container means, the horizontal bar being adapted to support a pair of trousers, a dress, a skirt, or a plurality of such items.

Claim 2 (cancelled). An improved method for coordinating a process of dressing a person comprising the step of using the hanger described in claim 1.

Claim 3 (cancelled). A clothing hanger for holding clothing, the clothes hanger marked to indicate a specific day, the clothing hanger comprising a rigid upper part and a rigid lower part attached to the upper part, the upper part having attached thereto a hanging means for hanging said hanger, a transparent container detachably connected to the clothing hanger, the lower part comprising a horizontal bar for supporting clothing, the hanging means having attached thereto a messaging means for communicating instructions to an impaired person for dressing using clothing on the hanger and in the transparent container.

Claim 4 (cancelled). The clothing hanger according to claim 3 wherein the messaging means comprises a communications module actuated by motion.

Claim 5 (cancelled). The clothing hanger according to claim 4 wherein the communications module is an electronic digital voice recorder with a recorded instructional message in a voice familiar to the user.

SN 10372,422

Claim 6 (cancelled). The clothing hanger according to claim 5 wherein the electronic communications module is a wireless digital receiver and audio transmitter adapted to receive and repeatedly play an pre-recorded message wirelessly transmitted from a wireless digital signal source.

Claim 7 (cancelled). The clothing hanger according to claim 6 wherein the wireless digital signal source is a home computer connected to a wireless network and wherein the electronic communications module is connected to said wireless network.

Claim 8 (cancelled). The clothes hanger according to claim 7 wherein the clothes hanger is disposable.

Claim 9 (cancelled). The clothes hanger according to claim 3 wherein the communications module is manually actuated.

Claim 10 (cancelled). The clothes hanger according to claim 3 where the communications module is automatically actuated by exposure to a selected light intensity.

CLAIM AMENDMENTS**Listing of New Claims:**

Claim 11 (new). An improved clothing hanger, the clothes hanger marked to indicate a specific day of the week, adapted for personal use comprising a triangular rigid upper part adapted to receive a shirt, coat, blouse or the like, the upper part having attached thereto a closet rod hanging means or hook, the hook having attached thereto a text messaging means wherein the messaging means comprises a communications module actuated manually or by motion or by exposure to a selected light intensity and is an electronic digital voice recorder with a recorded instructional message, wherein the electronic communications module is a wireless digital receiver and audio transmitter adapted to receive and repeatedly play a pre-recorded message wirelessly transmitted from a wireless digital signal source, wherein the wireless digital signal source is a computer connected to a wireless network, and wherein the electronic communications module is connected to a wireless network for communicating instructions to a child or an impaired person for dressing using clothing on the hanger and in a transparent or translucent container means detachably connected to the upper part, the container means being adapted to hold articles of clothing such as underwear, belts, scarves, socks and the like, at least one horizontal bar attached to the upper part and located underneath the container means, the horizontal bar being adapted to support a pair of trousers, a dress, a skirt, or a plurality of such items.

Claim 12 (new). An improved method for coordinating a process of dressing a child or an impaired person comprising the step of using the hanger described in claim 11.

Claim 13. (new) An improved disposable clothing hanger adapted for personal use comprising a triangular rigid upper part adapted to receive a shirt, coat, blouse or the like, the upper part having attached thereto a closet rod hanging means or hook, the hook having attached thereto a text messaging means for communicating instructions to a person, a transparent or translucent container means detachably connected to the upper part, the container means being adapted to hold articles of clothing such as underwear,

SN 10/372,422

belts, scarves, socks and the like, at least one horizontal bar attached to the upper part and located underneath the container means, the horizontal bar being adapted to support a pair of trousers, a dress, a skirt, the clothes hanger marked to indicate a specific day, the clothing hanger comprising a rigid upper part and a rigid lower part attached to the upper part, the upper part having attached thereto a hanging means for hanging said hanger, a transparent container detachably connected to the clothing hanger, the lower part comprising a horizontal bar for supporting clothing, the hanging means having attached thereto a messaging means for communicating instructions to a person for dressing using clothing on the hanger and in the transparent container, the messaging means further comprising a communications module actuated by motion, the communications module being an electronic digital voice recorder with a recorded instructional message in a voice familiar to the user, the electronic communications module being a wireless digital receiver and audio transmitter adapted to receive and repeatedly play a pre-recorded message wirelessly transmitted from a wireless digital signal source, the wireless digital signal source being a home computer connected to a wireless network, the electronic communications module being connected to said wireless network, the communications module being manually actuated and automatically activated by exposure to a selected light intensity.
